In recent years more emphasis has been placed on the quality and the safety of indoor environment. Since people spend 70–90% of their time indoors, clean air & surfaces are clearly important for health and wellbeing.

The microbes are very comfortable in humidity and warm surroundings. Threats such as SARS, Legionella, Tuberculosis, Norovirus and fungi are drawing attention to the control of contamination.

The micro toxins are gasses that microbes are developing. Research shows that exposure of micro toxins can cause allergies, headaches, tiredness and reduce immune system, even over time it can cause cancer and lounge or heart diseases.

- For highest standard and quality of your services
- For marketing among your customers
- For easy and effective solution against infections on board

Our technology empowers us to bring the top level disinfection to your indoor environment ensuring top quality and safety
